

# Equilibrium of Rigid Bodies and Construction Free-Body Diagrams

Steven Vukazich

San Jose State University

## General procedure for the Analysis of Bodies in Static Equilibrium

- Choose the free body to isolate;
- Draw a **Free Body Diagram (FBD)** of the body;
  - Isolate the body from all of its surroundings,
  - Magnitudes and directions of all known and unknown forces acting on the body should be included and clearly indicated,
  - Indicate dimensions on the FBD,
- Write the **equations of equilibrium** and solve the equations for the unknown quantities.

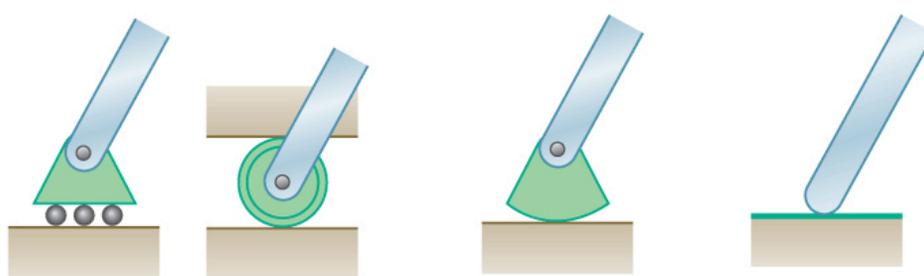

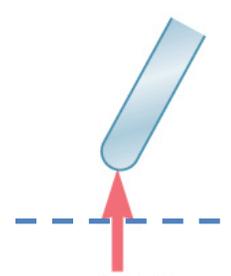

## General Procedure for the Construction of Free Body Diagrams

- Choose the free body to isolate;
- Isolate the body from all of its surroundings;
- Magnitudes and directions of all known and unknown forces acting on the body should be included and clearly indicated;
- Dimensions should be indicated on the FBD.

**Most errors in mechanics problems result from a mistake in the FBD**

# Reactive Forces at Supports for Planar Structures

Reactive force with unknown magnitude and known line of action

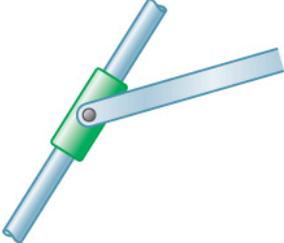

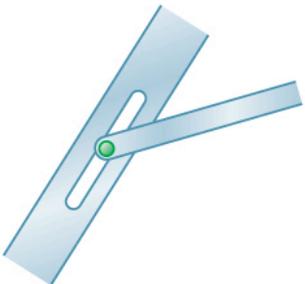

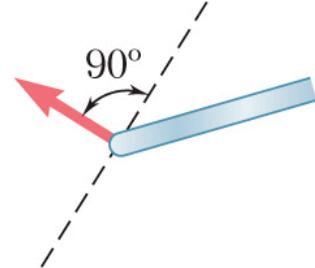

Support or Connection	Reaction	Number of Unknowns
 <p>Rollers      Rocker      Rocker      Frictionless surface</p>	 <p>Force with known line of action</p>	1

force is perpendicular to surface

## Example of a Roller Support

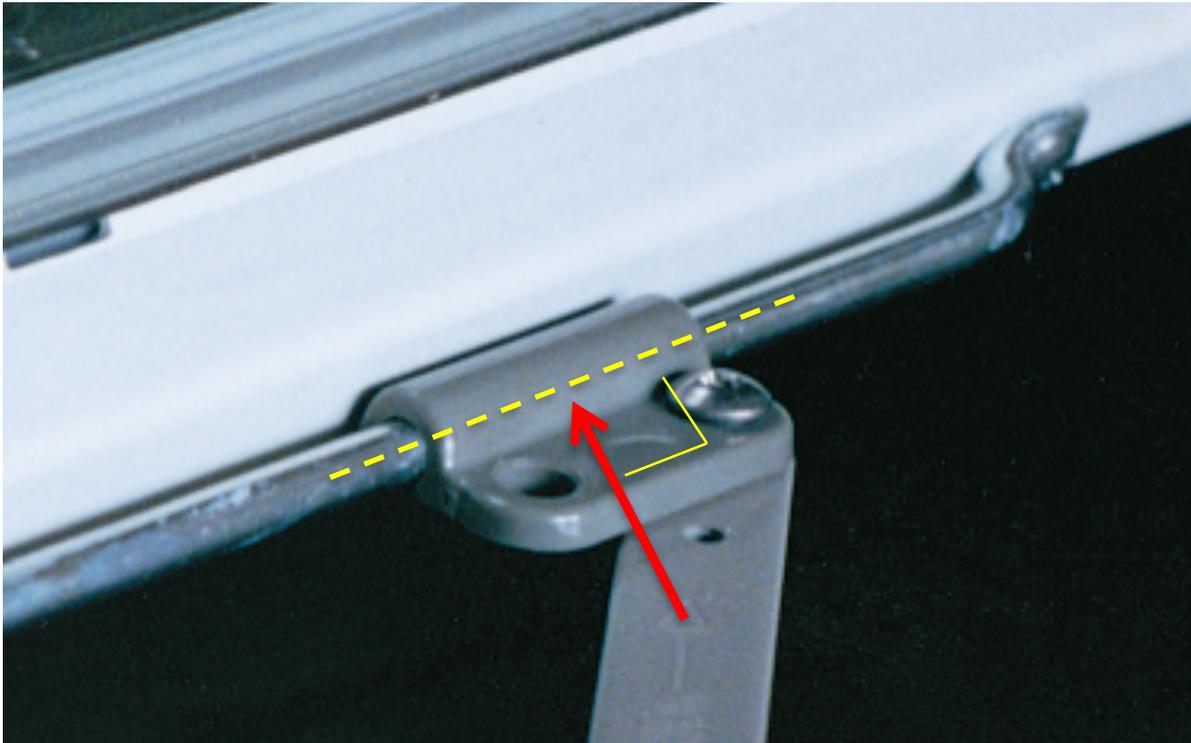

## Reactive force with unknown magnitude and known line of action

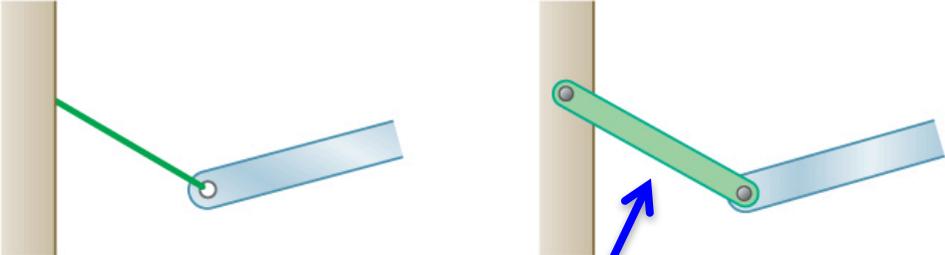

Support or Connection	Reaction	Number of Unknowns
<div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;">  <p>Collar on frictionless rod</p> </div> <div style="text-align: center;">  <p>Frictionless pin in slot</p> </div> </div>	<div style="text-align: center;">  <p>Force with known line of action</p> </div>	1

Force is perpendicular to rod or slot

## Example of a collar on a guide rod

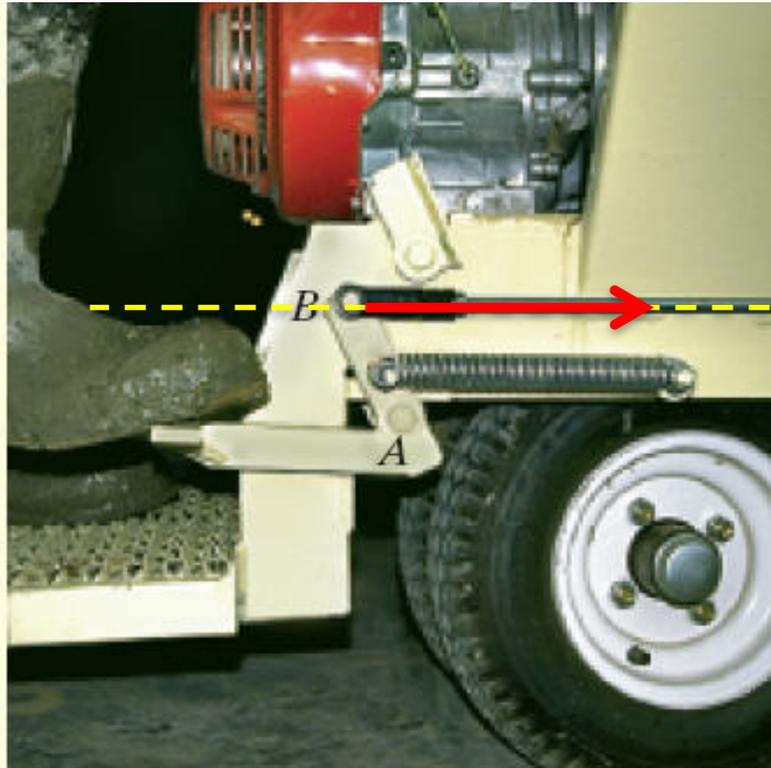

# Reactive force with unknown magnitude and known line of action

Support or Connection	Reaction	Number of Unknowns
 <p data-bbox="310 878 537 922">Short cable</p> <p data-bbox="863 878 1056 922">Short link</p>	 <p data-bbox="1289 883 1650 971">Force with known line of action</p>	<p data-bbox="1818 781 1839 824">1</p>

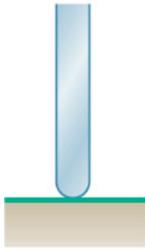

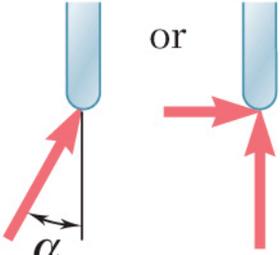

Link is a two-force member

Force is directed along the line of the cable or link

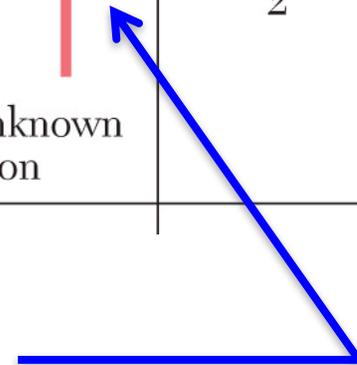

# Examples of short links

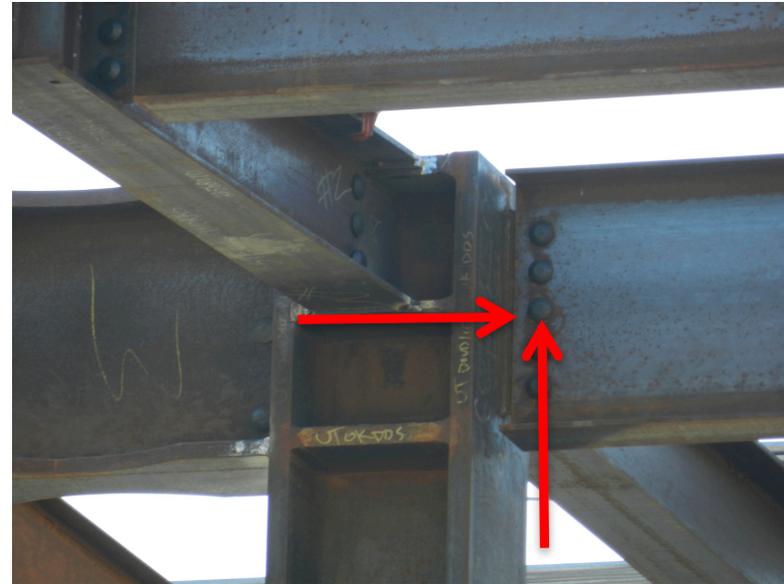

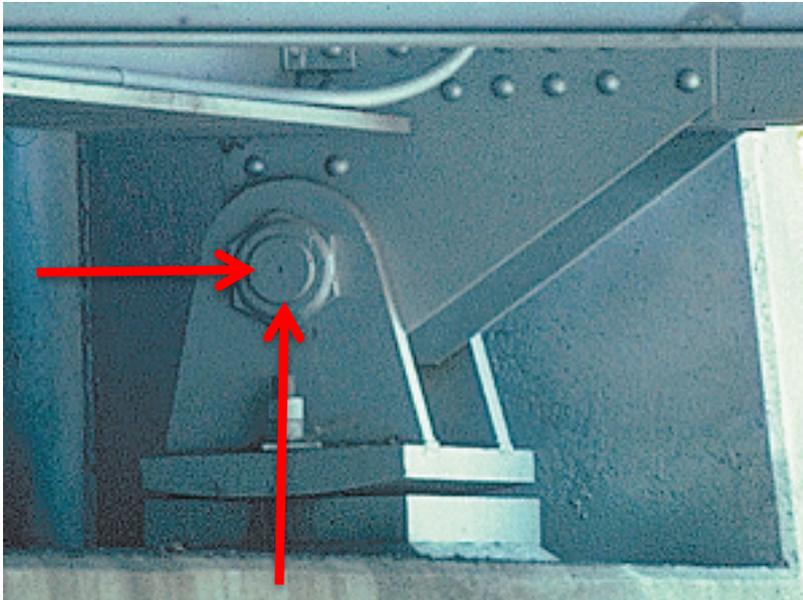

## Reactive force with unknown magnitude and unknown direction

Support or Connection	Reaction	Number of Unknowns
<div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;">  <p>Frictionless pin or hinge</p> </div> <div style="text-align: center;">  <p>Rough surface</p> </div> </div>	<div style="text-align: center;">  <p>Force of unknown direction</p> </div>	2

Usually the most convenient way  
to express the two unknowns

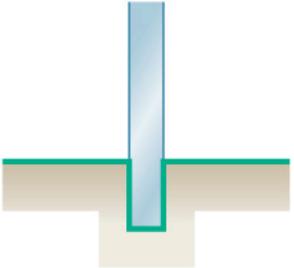

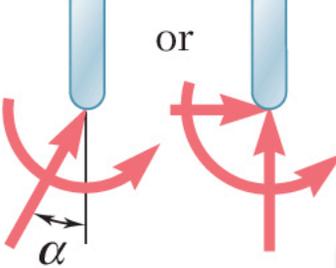

## Examples pin supports and pin connections

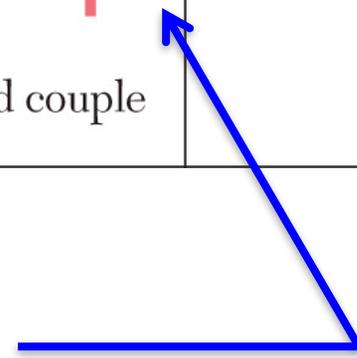

This beam connection where only the beam web is bolted to the column is usually modeled as a pin connection

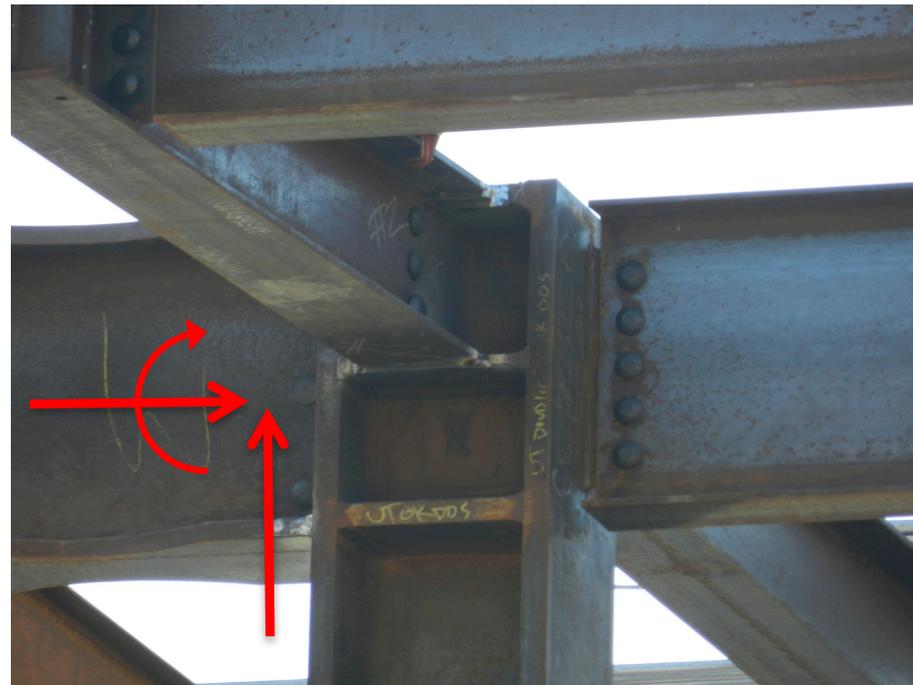

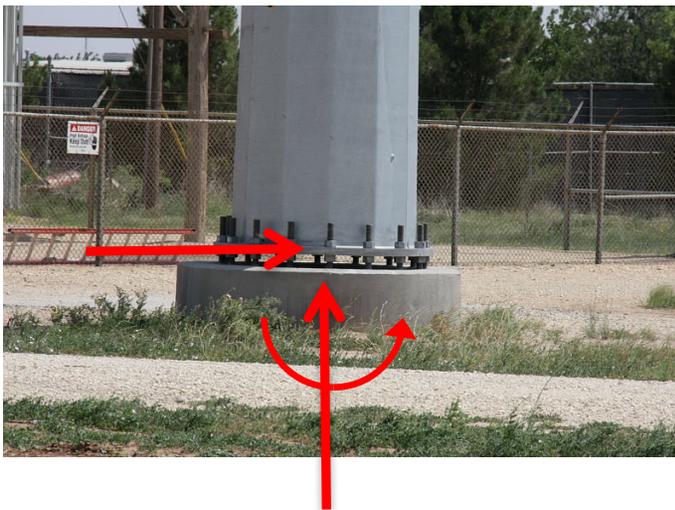

Reactive force with unknown magnitude, unknown direction, and an unknown moment

Support or Connection	Reaction	Number of Unknowns
 <p data-bbox="577 1055 829 1112">Fixed support</p>	 <p data-bbox="1396 795 1438 828">or</p> <p data-bbox="1249 1079 1575 1128">Force and couple</p>	<p data-bbox="1711 925 1753 966">3</p>

Usually the most convenient way to express the three unknowns

## Examples rigid supports and rigid connections

This beam connection where the beam flanges are welded to the column is usually modeled as a rigid (moment resisting) connection

# Scalar Equations of Static equilibrium

General three-dimensional  
body

$$\begin{aligned}\sum F_x = 0 & \quad \sum F_y = 0 & \quad \sum F_z = 0 \\ \sum M_x = 0 & \quad \sum M_y = 0 & \quad \sum M_z = 0\end{aligned}$$

General two-dimensional  
(planar) body

$$\begin{aligned}\sum F_x = 0 & \quad \sum F_y = 0 & \quad \sum F_z = 0 \\ \sum M_x = 0 & \quad \sum M_y = 0 & \quad \sum M_z = 0\end{aligned}$$

# Scalar Equations of Static equilibrium for concurrent force systems

Three-dimensional  
body with concurrent forces

$$\sum F_x = 0 \quad \sum F_y = 0 \quad \sum F_z = 0$$

$$\sum M_x = 0 \quad \sum M_y = 0 \quad \sum M_z = 0$$

Two-dimensional (planar)  
body with concurrent forces

$$\sum F_x = 0 \quad \sum F_y = 0 \quad \sum F_z = 0$$

$$\sum M_x = 0 \quad \sum M_y = 0 \quad \sum M_z = 0$$
