

## Primate Characteristics

- What characteristics define primates?
- What are they an adaptation for?
- What was the likely early primate adaptation?

---

---

---

---

---

### Traits of Primates

- Emphasis on vision
  - binocular or stereoscopic vision
  - forward facing eyes
  - postorbital bar or post orbital closure

---

---

---

---

---

### Limbs and locomotion

- Erect posture
- retention of clavicle
- Grasping hands with opposability
- Nails instead of claws

---

---

---

---

---

### Diet

- Generalized dentition
- Tendency towards omnivory

---

---

---

---

---

## Senses, brain and behavior

- emphasis on vision
- decreased snout and olfactory areas
- larger and more complex brain
- longer gestation, infancy, life span
- more k-selected (tend towards single offspring)
- greater dependency on learned behavior
- more social

## Primate trends

- Arboreal adaptations
- Dietary plasticity
- Behavioral complexity

## Primate Evolution and Diversity

- Primates arose as part of the Tertiary mammalian radiation after the dinosaurs went extinct.
- First clear primates identifiable in the fossil record by 50 mya.
- Today about 350 species of primates (compared to, say, 2277 species of Rodentia or 260 species of Carnivora)

Figure 5.2 Geographic Distribution of the Living Primates

Primate body size and shape vary widely from the 440-lb. (200-kg) gorilla to the 2oz. (40-g) mouse lemur.

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

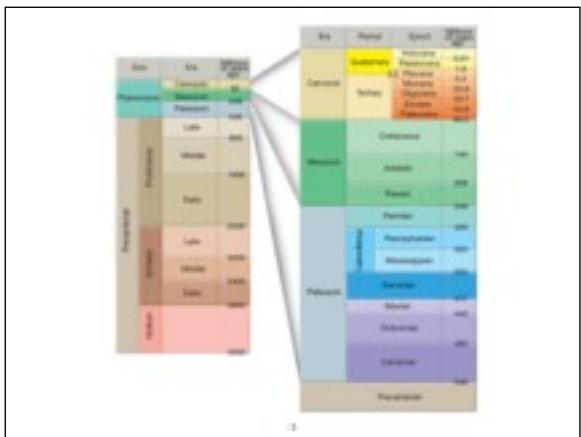

---

---

---

---

---

---

- ### Paleocene
- Infraorder: Plesiadapiformes
  - proto-primates
  - teeth-like primates, otherwise not really
    - no post-orbital bar
    - claws

---

---

---

---

---

---

---

## Tree Shrew

---

---

---

---

---

## *Plesiadapis*

---

---

---

---

---

## *Purgatorius*

---

---

---

---

---

## Eocene

- First true primates
- Prosimian "grade"
- Strepsirrhine characteristics

---

---

---

---

---

## Eocene continents

28

---

---

---

---

---

---

## Strepsirrhines

- Lemurs, lorises and galagos
- often used interchangeably with Prosimian (difference is placement of the tarsier)

29

---

---

---

---

---

---

## Strepsirrhines

- reliance on olfaction
- often nocturnal (lorises and galagos)
- lack of complex social behavior
- tooth combs
- some claws

30

---

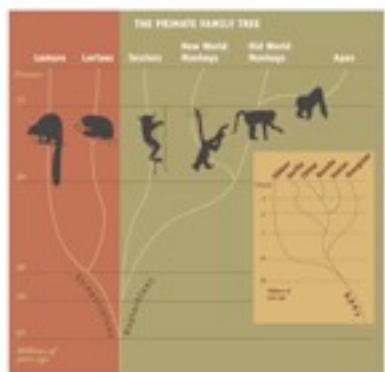

---

---

---

---

---

31

---

---

---

---

---

---

20

---

---

<http://www.laits.utexas.edu/shapiro/index.htm>

21

---

---

---

---

---

---

---

---

## Strepsirhini

- Lemuroidea
  - lemurs and the aye-aye
- Lorisoidae
  - lorises and galagos

22

---

---

---

---

---

---

---

---

## Strepsirhine Distribution

23

---

---

---

---

---

---

---

---

## **Mouse lemur**

Lemurs:

- ONLY on Madagascar
- from really small (<5 inches) to moderate (about 2 feet)

---

---

---

---

---

## **Madagascar**

---

---

---

---

---

## **Mongoose Lemur**

Lemurs:

- both nocturnal and diurnal
- both arboreal and terrestrial

31

---

---

---

---

---

## **Fat-tailed Dwarf Lemur**

32

---

---

---

---

---

### **Red Ruffed Lemur**

33

---

---

---

---

---

---

### **Black and White Ruffed Lemur**

34

---

---

---

---

---

---

### **Golden Bamboo Lemur**

---

---

---

---

---

---

### **Ring-Tailed Lemur**

#### **Lemurs:**

- both quadrupedal and vertical climbers and leapers (VCL)

35

---

---

---

---

---

---

## Vertical Clinging and Leaping

37

---

---

---

---

---

---

---

**Indri**

- Lemurs
- scent mark
  - diurnal lemurs tend to have more complex social relationships

38

---

---

---

---

---

---

---

**Aye-aye**

39

---

---

---

---

---

---

---

**Aye-Aye**

40

---

---

---

---

---

---

---

## Aye-Aye hand

41

---

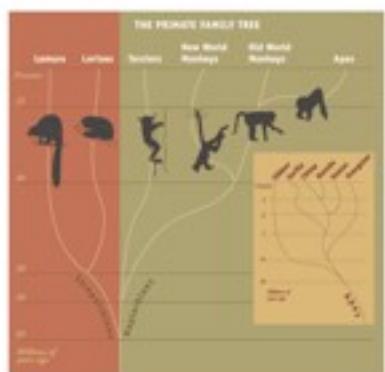

---

---

---

---

---

42

---

---

---

---

---

---

## Loris

Loris - Asian  
and African  
(Potto)  
Galagos -  
African

- nocturnal
- scent mark
- solitary
- claw
- tapeta lucetum

---

---

---

---

---

---

## Slow loris

44

---

---

---

---

---

---

### Pygmy Loris

### Potto

### Galago

- nocturnal
- VCL
- rat to cat size

### Lesser bushbaby

**IDA**

---

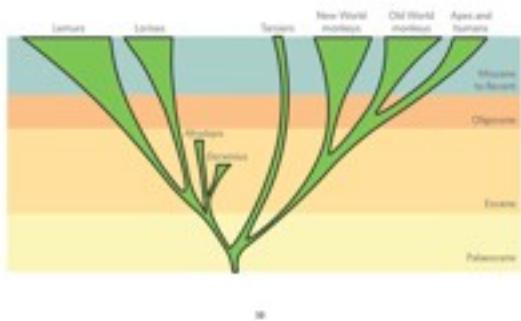

---

---

---

---

### Ida and the Family Tree

---

---

---

---

---

### Primate Suborders

- Haplorhini vs. Strepsirrhini
- Anthropoid vs. Prosimian
- What are the differences between these two ways of dividing the primates?

---

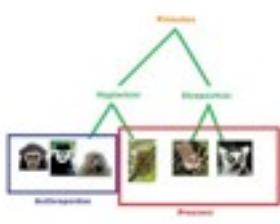

---

---

---

---

### Traditional vs. Modern Taxonomy

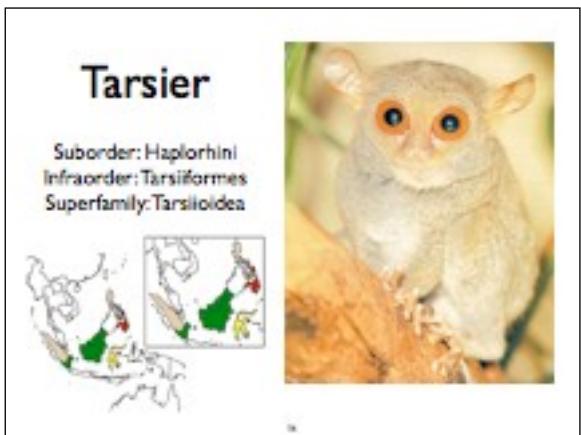

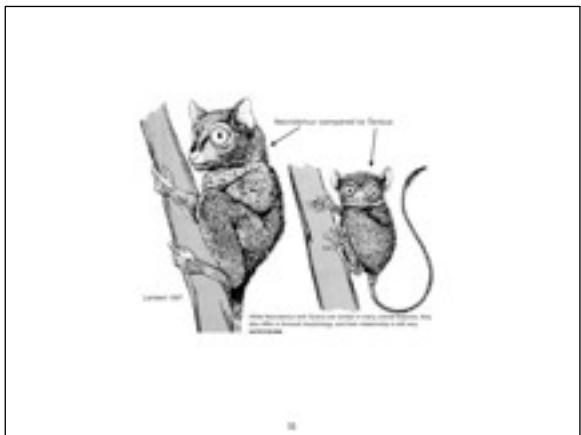

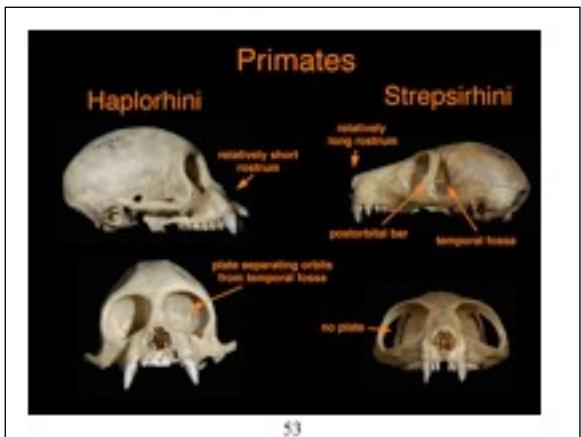

---

---

---

---

---

## Tarsier

- nocturnal
- no rhinarium
- grooming claw
- carnivorous
- monogamous pairs
- no tooth comb

---

---

---

---

---

---

---

---

## Tarsier Skull

---

---

---

---

---

---

---

---
